

## **UX/UI DESIGNER. VILNIUS, LITHUANIA**

We're looking for a Mid-Senior or Senior UX/UI Designer to join our team and take a leading role in shaping the user experience of our ERP platform. You'll work across multiple product teams, collaborating with Product Owners, developers, and stakeholders to create a unified and intuitive experience.

Our ERP system is split into two product teams, each led by a different Product Owner. Your mission? Oversee and align the full user experience across the entire system — from A to Z — ensuring consistency, usability, and clarity at every touchpoint.

### **Main responsibilities:**

- Understand and analyze the current system – both its functions and user flows.
- Identify UX issues and propose clear, value-creating improvements.
- Participate in the creation of new features – from concept to prototype.
- Conduct UX research: interviews, testing, heuristic analysis, data interpretation.
- Create user journeys, information architecture, and wireframes.
- Build prototypes in Figma and collaborate with PO, design, and dev teams.
- Ensure a consistent and clear UX strategy throughout the entire ERP product.

### **What We're Looking For:**

- UX mindset and research experience
- Ability to systematically analyze user experience and suggest research-backed changes.
- Understanding of B2B and data-intensive, non-standard systems.

### **Analytical and structured thinking:**

- Ability to independently "dig into" complex systems.
- Strong reasoning skills – why change, what to change, and how to measure it.

### **Technical skills:**

- Excellent Figma skills (wireframes, prototypes, components).
- Understanding of UX principles, user behavior, and information architecture.

### **Collaboration skills:**

- Experience working with products managed by PO/dev teams.
- Ability to work with "challenging" stakeholders (engineers, specialists).
- Clear and direct communication.

### **Nice to Have:**

- Experience with B2B, ERP, or industrial/technical systems.
- Background in regulated industries (aviation, transport, manufacturing).
- Experience building design systems or component libraries.
- Experience working in Agile SCRUM teams.

Salary: from 3700 € (brutto)
